

❶ Clean water is used to wash the milking parlor and equipment and cool milk tanks. ❷ Then this clean water is used to wash cows. ❸ This water is then captured in a storage pond. It is reused to flush manure from barn floors multiple times. ❹ Water from storage ponds is reused as an organic, nutrient-rich fertilizer for feed crops for cows.

Dairy Cares is a non-profit organization focused on ensuring the long-term sustainability of California's dairy farm families.
